

**Life Force International  
Compensation Plan  
FAQ's**

**Q: With the new Fast Start Bonus, what happens if the first upline sponsor is an Associate 1 or 2, does that mean they won't get paid?**

A: Correct. In order to earn upline sponsor commissions in this bonus, you must be a fully qualified Associate 3 or above.

**Q: What does "dynamic compression" mean?**

A: This term refers to the way in which the computer program seeks out qualified uplines to pay commissions. Dynamic compression starts with the person who placed the order and works its way up the upline sponsor tree until it finds those upline members with the correct qualifications for a bonus. It will continue to search and bypass members who are not fully qualified, which is why the term "compression" is used. It is "dynamic" because it actively seeks out the correct upline. It is possible within dynamic compression to pay many levels.

**Q: With the Fast Start Bonus, what happens if the enroller of the new BV also happens to be a Platinum? Do they get all the bonus money?**

A: No. The maximum amount that can be earned by the enroller is 45 percent.

**Q: If I am a Diamond, and I start to build a new leg, can I qualify to earn dynamic compression with the Fast Start Bonus?**

A: Yes. This upline sponsor payout encourages all members to build new legs regardless of rank. If a Diamond starts a new leg, as the upline "Platinum or above," they can earn at least 10 percent.

**Q: Are these payments in the Advancement Bonus guaranteed?**

A: Yes. As long as the member meets all the qualifications to earn the bonus, especially those that must hold the new rank for a series of consecutive months to continue to earn the remaining payouts of their bonus.

**Q: What if a lot of people earn the Advancement Bonus in a certain month?**

A: This does not affect payment disbursement. Each qualified earner for that month would still receive the bonus payment.

**Q: What is unencumbered volume?**

A: It is the volume inside a Diamond generation below you that is not a part of any other Diamond generation.

**Q: What is horizontal compression? Why is it used?**

A: It is used to take open volume, which is volume not associated with a Diamond Generation, and move it into a Diamond Generation in order to increase a member's pro-rata score in the Generational Power Bonus.

**Q: Why do the percentages drop quicker on the largest leg in the Generational Power Bonus?**

A: The percentages decline to encourage business builders to build a second and third Diamond leg on the road to Royal Crown Diamond.

**Q: Why does the company give 100 percent credit for the volume on Leg #4 in the Generational Power Bonus?**

A: To encourage business builders to build as many Diamond legs as they can.

**Q: How long are the doubled bonuses going to be available for the Advancement Bonus?**

A: The doubled bonuses will be reviewed periodically by the Life Force management team. No specific date has been set.
